

Nevada is Dry but we can help

Create Water from Air

Using Solar Energy

Want a pool?

Need a Garden?

Want a lush lawn?

Need a break from Water rationing?

Production varies by area however under 10 square foot of thermal collector space per gallon per day is a reasonable estimate.

Correct-Energy-Solutions is investigating options for making these units available to the poor in Africa and Asia.

We are working to incorporate these units into strategic plans of water authorities like SNWA to minimize risks from future droughts.

A man portable version intended to be carried by soldiers deployed in hot dry deserts where a shortage of water can be deadly is available.

Need Water?

No Groundwater?

No water permits?

No City Water?

A2WH CAN HELP

206-601-2985

You can have adequate water during the worst drought

- Patent Pending
- No Power
- No Fuel
- Solar powered
- Thermal energy or Photo Voltaic
- Wide variety of sizes
- High Purity Water
- Deploy on land where there is no water.

The Correct-Energy-Solutions water from air extraction device (WAED) harvests the water vapor found in air and converts it to liquid water. It works well in the dry desert and even better in humid areas like Atlanta.

Water from air extraction is normally very expensive but the Correct-Energy-Solutions technology overcomes this by being able to convert solar heat directly into the energy needed to drive the process which removes the most expensive component, electricity from the equation.

We are currently selling units sized for personal yard or agriculture use. They are intended for situations where there is no water available or where restrictions prevent you from using any additional water.
